

Project Brief

All Project Scopes are in this
document

Park City Peaks Hotel

Park City Peaks Hotel provides hotel accommodation to tourists and business travellers.

At the moment, the hotel manager can get an excel spreadsheet that he downloads from the Hotel Booking system.

He has given us the spreadsheet and would like to see the following:

- Bookings and Cancellations the hotel gets in a monthly basis
- Repeated Guests Statistics
- The food option guests generally chooses
- Do they get singular travellers or family bookings on average?

Park City Peaks Hotel

Greatfit

Greatfit is an online e-commerce store that sells ladies clothing. They make a lot of sales through various platforms. Customers generally leave reviews and Greatfit hasn't been doing any analytics and investigation in the reviews.

The Customer Service manager has asked you to develop a dashboard to give her an idea of how the reviews are. She wants the following

1. Do they get a lot of negative/positive reviews?
2. Analysis on the reviews by division
3. Do people recommend their products?
4. Do reviews mention anything about returning items?

She will also like the option to investigate bad reviews. The excel sheet is provided.

Greatfit

MegaMart

Megamart is a store which sells various goods to consumers all over the world. The company works only through Sales Agents who are responsible for selling products to their customers. The sales agents are responsible for the sales of products in specific product categories.

For example, Eli Kavanagh is responsible for selling products belonging in the following categories: Laptops, Kid's Clothing, Kitchen Tools.

The Sales Manager would like to have a complete sales dashboard based on the sales agents. He wants to select a sales agent and a specific sales month. From there, he wants to see the following

- 1.Sales for the agent every month
- 2.A scatterplot showing quantity by sales for each product category
- 3.Top 10 SKUs by Sales of the selected month
- 4.Top 5 product categories by sales of the selected month

In addition to this, he wants to input a sales target and see how the sales agent is tracking. The data is supplied below

Data

OLIST Logistics

Olist is an online e-commerce store which sells and delivers items all over Brazil. The Logistics Manager, doesn't receive any reporting and works off a few spreadsheets.

He is responsible for optimizing the purchase and delivery process. He explains below what this consists:

When a customer orders from us, they make a purchase online. We then deliver all the orders. It is important for us to deliver orders within the estimated delivery date we have given to the customer otherwise the customers complain if their order is late. I want to have a line of sight of orders that have not been delivered yet.

OLIST Logistics

Using this information, he would like the following on a monthly basis:

- Total Orders per Month
- Number of orders delivered after the estimated delivery date given to the customer
- Orders outstanding delivery

OLIST Logistics
